THE COMMERCE LAYER FOR SMALL BUSINESSES

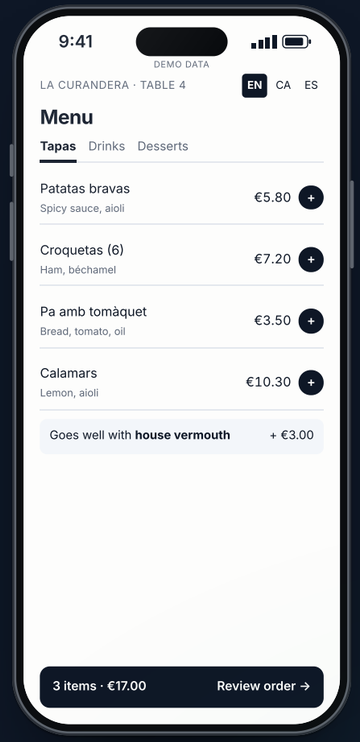

Your offer. Online.

From an existing menu or service list to customer actions — without replacing the systems independent businesses already use.

Browser-first beta | EN / ES / CA | Barcelona → MENA / LatAm tests

Paper menu

EXISTING CONTENT → REAL PRODUCT UI

BSC AI FACTORY · TECHNICAL GOAL

AI-ready onboarding

Benchmark extraction, human review and multilingual quality

01 / THE PROBLEM

A menu is not a customer journey.

Customers move through disconnected steps. Merchants lose context and have to intervene.

DISCOVER		UNDERSTAND		CONTACT		ACT		LEARN
Map or feed	→	PDF or photo	→	Chat or call	→	Separate checkout	→	Disconnected data
01		02		03		04		05

Every handoff creates a reason to abandon.

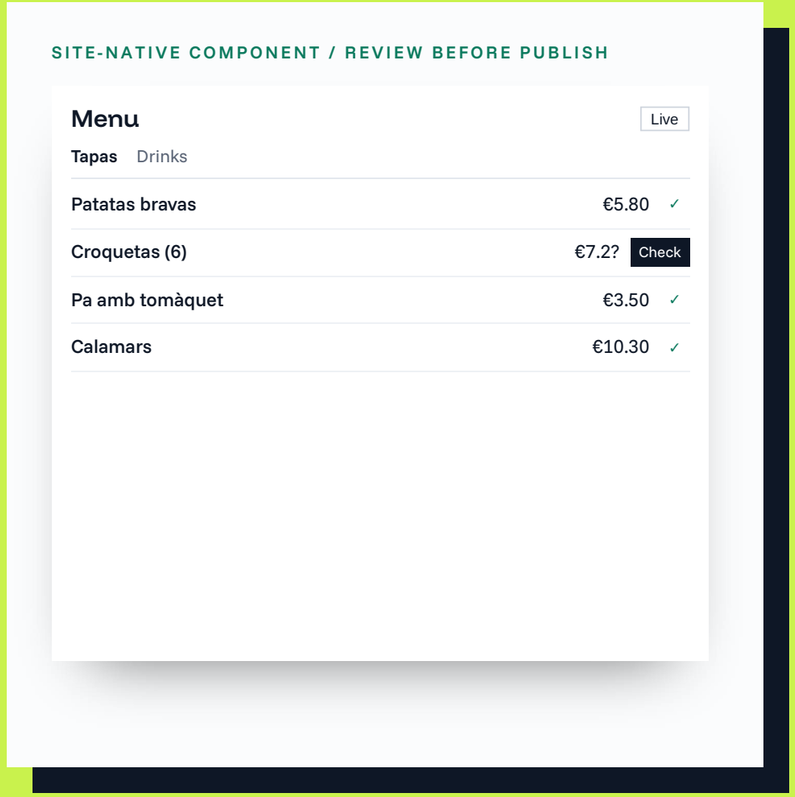

Language barriers / missed upsells / manual service / fragmented signals.

Opportunity Make existing business information immediately useful to the customer, in one browser flow.

01 / PRODUCT

A list becomes a journey.

Oído turns existing business information into a useful mobile customer interaction — without a forced software migration.

CAPTURE → REVIEW → ACT → LEARN

Source: Oído website component / working beta; menu values illustrative

02 / THE CORE PRODUCT

The page is born from what already exists.

Capture an existing offer, review uncertain entries and publish only merchant-approved information.

01 **Capture the offer.**
Menu, PDF, chalkboard or service list.

02 **Review every field.**
Uncertain information is flagged for approval.

03 **Publish a URL and QR.**
Customers open it immediately without an app.

Actual Oído browser UI. The demonstration does not prove completely automated merchant onboarding.

SITE-SOURCED OFFER / HUMAN REVIEW BEFORE PUBLISH

04 / PRODUCT IN USE

The customer can act, not just browse.

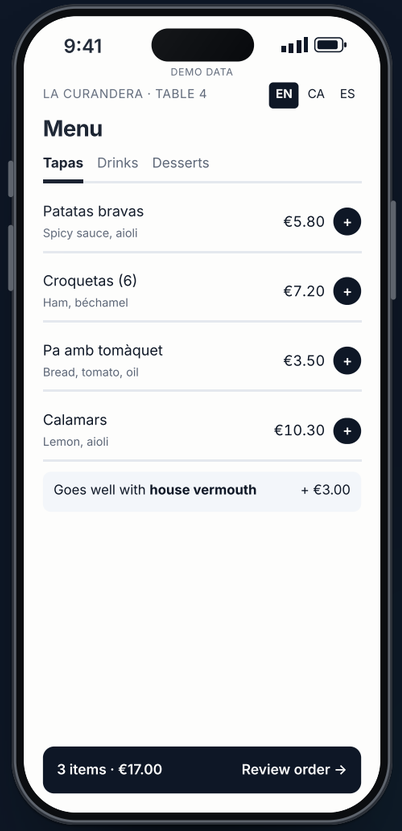

A single source-native phone component demonstrates orders, language, extras and feedback. Settlement remains a planned integration.

01 **Menu → order**
Let guests explore and submit a demo order.

02 **Language → clarity**
Offer the same content in multiple languages.

03 **Split bill → control**
A demo for guests sharing a table and settling separately.

04 **Thanks → feedback**
Capture tips and ratings in the experience.

EXACT PHONE / RECEIPT COMPONENTS FROM OÍDO

05 / MERCHANT ONBOARDING

From the list to a customer-ready page.

A practical, reviewable workflow for merchants instead of a technical implementation project.

01
Photograph it

02
Check the flags

03
Add languages

04
Put out QR and link

Current phase: working onboarding demo + assisted merchant pilot setup. Fully autonomous onboarding is a milestone, not a claim.

↗ Flag ambiguous prices before publishing

06 / AI SYSTEM DESIGN

A bounded, testable AI pipeline.

We will benchmark open or commercial multimodal options before committing to training or model infrastructure.

01 / INPUT & EXTRACTION

Read real menus.

Merchant-authorised PDFs, photographs and service lists; OCR and multimodal parsing into a consistent item schema.

No model training claimed today.

02 / STRUCTURE & QUALITY

Verify every field.

Item names, prices, options, allergens, languages and source references; confidence flags and validation rules.

Merchant approval stays mandatory.

03 / DELIVERY & SIGNALS

Publish with context.

Approved multilingual content becomes a lightweight mobile page. Track corrections, setup time and downstream user tasks.

Traceability before automation at scale.

TECHNOLOGY STATUS

Product UI and browser beta are real. AI ingestion, model adaptation and automated merchant onboarding are development hypotheses.

07 / AI RESEARCH & COMPUTE

We need measured AI quality, latency and cost.

BSC AI Factory can help turn a plausible workflow into a reproducible technical and economic comparison.

01 / DATASET & GROUND TRUTH

Curate the tests.

Consented / synthetic menu samples across EN, ES and CA; annotate prices, dish terms, allergens and extraction errors.

Quality gates, not demo impressions.

02 / MODEL BENCHMARK

Compare the stack.

Assess OCR, multimodal encoders, structured output, translation and human correction; measure critical errors and review time.

Accuracy + failure taxonomy.

03 / SCALING PATH

Size the compute.

Benchmark CPU/GPU inference, batching, latency and cost per menu; test adaptation only if baselines are insufficient.

Compute justified by evidence.

WHY BSC AI FACTORY

Expertise and experimental compute access can establish the right architecture before we incur production-scale infrastructure costs.

08 / POSITIONING

Not another POS migration.

Oído starts above the systems a merchant already uses, then earns deeper integrations.

01 / CUSTOMER	Discover · browse · choose · respond	Browser-first interactions
02 / OÍDO	Multilingual offer + lightweight commerce layer	Branded pages · demo orders · feedback · signals
03 / SYSTEMS	Keep the merchant's existing stack	POS · accountant · calendar · licensed PSP

Less migration risk.

Faster activation hypothesis.

Recurring merchant value to prove.

02 / THE MARKET

266,476

Active hospitality businesses across Spain. A broad ecosystem, not an estimate of Oído's paying market.

10k+

Barcelona bars & restaurants
City economic agenda, 2025

61,827

Barcelona commercial premises
City Data Sheet, 2024 registry

1 market

Start where founders can meet the owner: Barcelona.

THE REAL TASK: QUALIFY → ACTIVATE → CONVERT → RETAIN

Sources: INE DIRCE 2025; Barcelona City economic agenda and Data Sheet 2025

10 / REPEATABLE DISTRIBUTION

Three different ways to learn.

The target markets are access pathways, not evidence of live operations.

ES

BARCELONA · FIRST PILOTS

Spain.

Founder-led conversations with 5–8 prospective merchants awaiting demos.

TEST: onboarding + willingness to pay

AE

DUBAI · PARTNER CHANNEL

UAE.

Existing partner access; merchant commitments and compliance yet to confirm.

TEST: partner discovery + support

MX

RESTAURANT NETWORK · REMOTE

Mexico.

Founder-family restaurant access enables remote setup and localization research.

TEST: remote activation + operations

SPAIN — UAE — MEXICO

One onboarding playbook, tested in different contexts.

13 / VALIDATION / NO VANITY METRICS

Access is not yet traction.

We report precisely what is known, and what is still to be earned.

SPANISH BUSINESSES / EXPRESSED INTEREST

5–8

Prospective merchants. Demos and actual willingness to pay remain to be confirmed.

0	Verified paying merchants
0	Live processed GMV
1	Working browser beta

Access is a useful beginning. Retention is the proof.

14 / COMMERCIAL MODEL

Simple pricing. Still a hypothesis.

Pilot price hypotheses. Recurring payment must be earned through recurring merchant value.

01 / SOLO

€39 / month

Get online.

Branded, multilingual customer page and QR link.

02 / VENUE

€79 / month

Start an action.

Demo orders, extras, status and customer signals.

03 / COMMERCE

€129 / month

Run with more clarity.

Operations, reporting and advanced workflow roadmap.

€79 proposed setup

Recurring value hypothesis: updated offers, requests, feedback and reporting.

Payments / bookings not live · VAT excluded.

13 / BSC ACCELERATION PLAN

Four gates from AI feasibility to real merchant evidence.

A proposed 14-week programme path: the model must work on actual messy menus and reduce real setup effort.

W01–03

Define.

Freeze a permissioned evaluation set, schema and error severity levels.

GATE / ground truth + baseline

W04–06

Benchmark.

Compare extraction and multilingual quality; test critical-price and allergen failure modes.

GATE / accuracy + corrections

W07–10

Integrate.

Prototype merchant approval and instrument onboarding time, latency and cost.

GATE / end-to-end tested workflow

W11–14

Validate.

Run consented merchant tests and assess willingness to pay, support and repeat use.

GATE / pilot evidence + next decision

NO-GO RULE: Do not claim automated onboarding, paid retention or live settlement without tested production evidence.

14 / FOUNDERS & EXECUTION

A product-led team with real sector access.

Two founders, a browser-first beta and identified gaps that BSC's technical support can directly address.

CO-FOUNDER / PRODUCT

Daria Karpova.

CPO. Product strategy, UX research, digital product leadership, pilot design and business validation. Based in Barcelona.

Product discipline and market learning.

CO-FOUNDER / TECHNOLOGY

Diego Arredondo.

Product prototyping, digital implementation and partner outreach; contributes to technical iteration and cross-market access.

Build and test with the founders.

EXTENDED TECHNICAL CAPACITY

BSC support.

AI architecture, model evaluation, data quality and infrastructure benchmarking: the specific skills we seek to strengthen.

Specialists for the R&D bottleneck.

TEAM STATUS

Pre-incorporation founders' project. No claim of an employed AI research team, existing HPC systems or commercial production deployments.

15 / THE ACCELERATOR FIT

Make merchant onboarding measurable.

A focused opportunity to validate a genuine AI advantage: trustworthy extraction, low-friction activation and sustainable inference costs.

From a PDF.
To a verified catalogue.
To a real customer action.

PRODUCT TODAY

Working browser beta + merchant-reviewed interfaces.

01

BSC OBJECTIVE

Reproducible AI extraction and multilingual quality benchmarks.

02

COMMERCIAL GATE

Measured setup, live pilots and accepted paid terms.
